Art Unit: 1652

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-6, drawn to a DNA, a vector, a host cell and a method of making a restriction endonuclease using the host cell, classified in class 435, subclass 199, 320.1 and 252.3 and class 536, subclass 23.2.
- II. Claims 7-9, drawn to a restriction endonuclease and a method of obtaining the endonuclease, classified in class 435, subclass 199.

The inventions are distinct, each from the other because:

The DNA of group I and the enzyme of group II are completely different substances and are patentably distinct. A search of group I would entail a search for cloning while a search of group II would not entail a search for cloning. Group II would read on the enzyme as it occurs in nature.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
